Business Analysis Capstone Portfolio

Ndubuisi Anozie | Business Analysis • Data Analytics • Operational Performance

Two sectors. One evidence-led Business Analysis approach.

These two structured training capstones demonstrate requirements engineering, business process analysis, option evaluation, and benefits-led transformation planning in fintech and retail.

FINTECH

PayWave Microfinance & Digital Payments

Payments reliability, fraud, lending and compliance

20 DELIVERABLES • EXECUTIVE DECK

RETAIL

Smart Retail Connect

Checkout, inventory, service and reporting

20 DELIVERABLES • EXECUTIVE DECK

What the work demonstrates

01 Problem analysis and stakeholder engagement planning

02 Business, functional and non-functional requirements

03 As-Is / To-Be process modelling and gap analysis

04 SWOT / TOWS, capability analysis and business model design

05 Options appraisal, financial sensitivity, risk and roadmap

06 Solution evaluation and executive recommendations

CASE STUDY 01 | FINTECH

PayWave Digital Transformation

Simulated organisation with 500,000+ customers; digital wallets, P2P payments, merchant services, savings and micro-lending.

Business challenge

The case brief reported transaction failures, customer complaints, delayed loan approvals, fraud incidents, regulatory compliance challenges and declining retention. Actual company logs, licences and operating baselines were not provided.

Selected analysis and artefacts

18 Business requirements	**52** Functional requirements
28 Non-functional requirements	**34** User stories

Proposed solution and decision rationale

Recommended direction: gated modular modernisation of transaction, settlement, lending, fraud and data controls. Preserve financial finality, duplicate-prevention, independent reconciliation, approved credit authority and traceable customer redress.

ILLUSTRATIVE FINANCIAL MODEL — NOT ACTUAL RESULTS

Initial investment: ₦360m | 3-year NPV: +₦104.24m

Benefits, costs and project approval remain unverified assumptions.

Evidence, limits and work products

Methods: requirements traceability, process and interface flows, SWOT/TOWS, capability maturity, business case and sensitivity testing, risk matrix, roadmap and KPIs. Deliverables were drafted for academic assessment; interviews, audits and implementation were not conducted.

CASE STUDY 02 | RETAIL

Smart Retail Connect Transformation

Simulated 18-branch multi-category retailer operating across three unspecified states.

Business challenge

The case brief reported operational inefficiencies, declining customer satisfaction and digital-first competition. Root causes, the country of operation, system characteristics and financial performance were not verified; Nigeria was used only as a stated financial/market scenario.

Selected analysis and artefacts

14 Business requirements	**38** Functional requirements
24 Non-functional requirements	**24** User stories

Proposed solution and decision rationale

Recommended direction: a phased configurable integrated retail platform to improve checkout, inventory visibility, replenishment, complaint handling and management reporting. Begin with validation and a representative branch pilot, followed by conditional rollout.

ILLUSTRATIVE FINANCIAL MODEL — NOT ACTUAL RESULTS

Initial investment: ₦95m | 3-year NPV: +₦37.73m

Scenarios demonstrate a decision method, not delivered benefits.

Portfolio positioning

The two capstones demonstrate transferable Business Analysis practice across sectors: defining the problem before proposing technology, linking requirements to process and controls, making trade-offs transparent, and specifying evidence needed to validate business value.
